14-4. Detection of Right Upper Door in Position

Right Upper Door Set Sensor PC40, fitted to the copier body, detects the Right Upper Door when closed. The Vertical Transport Rollers (drive-end) and Multi Bypass Table are mounted to the Right Upper Door.
Right Upper Door Interlock Switch S22 is also installed just as with the Front Door.
When the Right Upper Door is closed, the ribs on the door activate/actuate PC40/S22.
